1 Access Control: Design and implementation of a flexible RBAC-service in 90%
an object-oriented scripting language
Gustaf Neumann , Mark Strembeck
Proceedings of the 8th ACM conference on Computer and Communications Security November 2001
> In this paper we present the design and implementation of the xorbac component that provides a flexible RBAC service. The xorbac, implementation conforms to level 4a of the unified NIST model for RBAC and can be reused for arbitrary applications on Unix or Windows with a C or Tcl linkage. xorbac runtime elements can be serialized and recreated from RDF data models conforming to a well-defined RDF schema. Furthermore we present our experiences with xorbac for t ...

3 RBAC for Collaborative Environments: Model driven security for process- 87%
oriented systems
David Basin , Jürgen Doser , Torsten Lodderstedt
Pr ceedings f the eighth ACM symp sium n Access control models and techn l gies June 2003
> Model Driven Architecture is an approach to increasing the quality of complex software systems based on creating high-level system models and automatically generating system architectures from the models. We show how this paradigm can be specialized to what we call Model Driven Security. In our specialization, a designer builds a system

1 Session 2: secure Web services: Designing a distributed access control   88%
processor for network services on the Web
Reiner Kraft
Proceedings of the 2002 ACM workshop on XML security November 2002
    The service oriented architecture (SOA) is gaining more momentum with the advent of
    network services on the Web. A programmable and machine accessible Web is the
    vision of many,and might represent a step towards the semantic Web. However,
    security is a crucial requirement for the serious usage and adoption of the Web
    services technology. This paper enumerates design goals for an access control model
    for Web services. It then introduces an abstract general model for Web services
    components, along ...

3 Dynamic views of SGML tagged documents   85%
B. Fraser , J. Roberts , G. Pianosi , P. Alencar , D. Cowan , D. German , L. Nova
**Proceedings of the 17th annual international conference on Computer
documentation** October 1999
    Product information is more frequently being delivered as hypertext webs or
    documents because of the availability of the World-Wide Web and the associated
    communications infrastructure. However, this type of document with its large number
    of files and hyperlinks can become very complex and present significant usability
    problems for the creator, maintainer and user. Because of this complexity it becomes
    extremely difficult to implement and maintain dynamic views of a document, a
